Art Unit: 3662

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-42, drawn to a system for finding the instantaneous spatial direction of a source of a radio signals, classified in class 342, subclass 432 .

II. Claims 43-50, drawn to a radar system, classified in class 342, subclass 149.

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention group II has separate utility such as in system without the devices to digitally calculate the instantaneous frequency of a detected signal, and the devices to digitally calculate, from frequency and phase difference, the azimuth of a source of a radio signal.

3. Inventions group I and group II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as in system without the memories, and the digital phase shifters.

4. Because these inventions are distinct for the reasons given above, the search required for group I is not required for group II, restriction for examination as indicated is proper.

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
